

Tabletop Refrigerated Centrifuge

5500

Various types of tubes can be centrifuged.

Features

- **Maximum speed 15,000rpm**
- **Maximum RCF 20,820xg**
- **Rapid acceleration**
10 sec to reach the maximum speed 15,000 rpm when AT-2018M micro rotor is used.
- **The temperature of sample is kept at 4°C.**
The ambient temperature is 25°C. See table of rotor for details.
- **Selective temperature indication/setting**
Whether the temperature of the chamber or the temperature of sample can be selected depending on the type and speed of the rotor.
- **Eco mode**
- **Motorized lid lock**
- **Biosealed rotor**
AT-2730M rotor is certified as bio-hazard proof with the CAMR standard.
- **Tool-less rotor**
Rotors can be mounted or dismounted without using a tool (except RA-508C Fixed angle rotor).

Easy-to-use and convenient functions

- **Memory Flashing**
Spin-down time from 1 to 90 seconds is memorized. The flashing key enables to call up the memorized spinning time.
- **Pre-cooling**
Enables rotor to reach low temperature before experiments.
- **Compliance with GMP requirements**
Equipped with tachometer port to comply with GMP requirements. Actual rotor speed is easy to check.
- **Delay start function**
The operation automatically starts after the preset duration from pressing the START key. This function enables the fresh blood to start centrifugation exactly when erythrocytes coagulate.
- **RCF (xg) -set operation function and stepped centrifugal force function**
- **Integrator function that can attain optimization of the condition of centrifugation.**
G-sec value (Integrated RCF value) can be measured and the operation with this value is possible.
- **Equipped with an automatic rotor identification when a rotor is simply placed on the drive shaft.**

⚠ Rotor has prescribed operating life cycle and years of operation, after that the rotor must be replaced. For more details, please contact us.

*** The number of times allowed for autoclaving is limited. For more details, please contact us.**
